

Burndown Chart

Burndown chart for sprint 3

Remarks:

- Due to our meeting with product owner on March 8th, new user stories were requested by him and old stories were modified or removed
- Started claiming and completion late, although we worked throughout the week we didn't add the stories early and claimed only when we neared completion
- Many other changes were made as we learned how to breakdown stories into tasks, tasks did not match total points so the points total kept being modified as we worked and made more sub tasks

Improvements:

Team needs to work on Jira from start of sprint week and claim user stories not only verbally but with Jira also
